7:45 P. M. Will leave Gold Hill and Carson City

THROUGH TICKETS can be obtained to

THURSDAY, JULY 1, 1875.

## A GIGANTIC FLUME.

Mackey and Fair's Work in Washoe County.

A 15-MILE FLUME COSTING \$260,000 BUILT IN TEN WEEKS.

A 33,000-ACRE TIMBER TRACT.

100,000,000 FEET OF SAW LOGS—30,000,000 FEET OF DRIED TIMBER—60,000 CORDS OF FIREWOOD.

SIXTY MILES AN HOUR IN A BOAT.

On Thursday, July 1st, the fifteen-mile flume of the Pacific Wood, Lumber and Flume Company will be completed, and the first stick of timber will be floated from the summit of the Sierras and landed at Huffaker's station. This is one of the most colossal fluming enterprises ever undertaken on the Pacific coast, involving great engineering difficulties and the outlay of

A QUARTER OF A MILLION OF DOLLARS.

The Pacific Wood, Lumber and Flume Company is practically composed of Messrs. John Mackay, J. G. Fair, J. C. Flood, and W. S. O'Brien, and it is for the purpose of supplying their mines and mills that the flume has been built. The mills of the Pacific Mill and Mining Company—comprising the Bacon, Trentham, Occidental, Kelsey, Devil's Gate, Hooper State, Consolidated Virginia, Sacramento and Mariposa mills—will all draw their supplies of wood from the lands tapped by this flume. The Consolidated Virginia, California, Hale & Norcross, Gould & Curry, Best & Befield and Utah mines will all receive their fuel and fuel from this source. These mills and mines consume about 40,000 cords of wood per year, and when it is remembered that firewood costs from \$11 to \$12 per cord, and timber from \$22 to \$34 per 1,000 feet, the vast saving to be made by having a supply within their own control will be apparent.

NOW THE FLUME PROJECT ORIGINATED.

About two years ago the tremendous item which wood and timber made in the expense of Mr. John B. Herford, the Superintendent of the mills of the Pacific Mill and Mining Company, to think! What ever leisure time was at his command he spent in journeys of exploration over the mountains within a radius of fifty miles from the city. The heavily wooded summits of the Sierras west and northwest from Huffaker's attracted his attention. For days and weeks at a time he wandered on horseback in this section, calculating the water supply and looking over the ground to decide the possibility of building aJune town the wild, rugged and canyon-beaten mountain side. A belief in the feasibility of the project gained up in him, and he set about searching titles and quietly buying up the land from the Government, the Railroad and private parties. This part of the business was done so shrewdly that before more than half a dozen people knew what was on foot, Mr. Herford had secured for his prince a some 12,000 acres of the best timber land north of Alpine county. But last Fall Mr. Herford engaged in services of Gothic. Haist, an expert of large experience, and they spent several weeks in making a rough, pretentious survey, which demonstrated the entire practicability of the flume scheme. Backed by unlimited capital, Mr. Herford went to work with a will. Roads were built up the mountain side and teams sent to work hauling machinery for two miles. The snows came just as this was begun, and much of the machinery was dragged up the Sierras in four or five feet of snow. The first mill was erected on the middle fork of Evans' Creek, about half way up the mountain side. The second mill is over two miles higher. Everything, timber, tools and machinery was dragged up by immense teams of oxen and horses. While it was possible to work during the winter the mills were kept going upon material for the projected flume.

THE FLUME.

The flume is of the V shape, made of 24 inch planks, two inches in thickness, and has a capacity of at least 500 cords of firewood per day.

or of 500,000 feet of timber. In several respects it differs from any flume yet constructed, and has been rather expensive in consequence, as it is intended to last at least twelve years. To gain a uniform grade (an indispensable requisite in so precipitous a country, where heavy timber is to be floated), it was found necessary to build the flume on trestle-work and stringers from one end to the other. The trestle-work, which in some places is forty-eight feet high, is substantial enough to support a narrow-gauge railroad, it being thoroughly braced longitudinally and across, so that no break can extend further than the length of a single box—16 feet. All the main supports, which are five feet apart, are firmly set in moundsills. The boxes rest in brackets placed four feet apart. These again rest upon the substantial stringers.

THE ENGINEERING DIFFICULTIES.

Consisting mainly, of course, in the mountainous character of the country. Even in the foothills—where to find a good course would seem an easy matter—the ground is broken by gulches and steep declivities, with outlets running at right angles to the direction of the flume. At some points the great canyons have made the matters of grade and turn problems of serious difficulty, only to be overcome by the highest engineering skill, and high and heavy trestle-work. Mr. Haist labored under the disadvantage of working upon virgin ground. The country was almost unknown because of its bright and the engineer had to trust entirely to his own sagacity and professional experience.

COURSE OF THE FLUME.

The flume commences in the Truckee Meadows at Huffaker's station. Thence it extends across the valley and foothills in a southwesterly direction for five miles. The course then changes to the northwest to the base of the mountains, a distance of eight miles. In this distance to complete the work in the shortest time possible, Mr. Herford, instead of waiting for his own mills to furnish the material, contracted with outside parties for all the timber necessary for this eight miles. From the foot of the mountains the flume winds up through the gorges and canyons on an average grade of sixteen inches to sixteen feet. The steepest fall is three feet in six, which however, is only for 200 feet. The grade above this fall is gradually accommodated so that the force of the current is much diminished. This really marvelous evenness of grade makes a jam—that bugbear of most flume works—almost impossible. The whole distance, from beginning to end may be ridden in safety in a boat.

A BOAT-RIDE DOWN THE FLUME.

The *Chronicle* mariner was tempted into taking a nine-mile voyage down the flume. By nailing a piece of board at the end of one of the boxes being floated down to the watermen, a very good boat is made. A strip of wood placed across furnishes a seat, and then the voyager can go down the flume or to destruction as luck has it. The *Chronicle*'s old salt, after taking a hitch at his trowsers, and blasting his tarry top-lights, seated himself in this now-familiar craft and sped away at the rate of twenty miles an hour, the landmen shouting after him to kick the stern out of his boat if he was in any danger and wanted to stop. This summary of dealing with the boat allows the water to flow through it and consequently diminishes the speed and drenches the unfortunate boatman. For the first mile or two the *Chronicle* navigator smoked his cigar comfortably and enjoyed the novel sensation of spinning along at an elevation of from twenty to forty feet through a thick pine forest, with the water swishing and gurgling fore and aft and no rowing to do. It was of only pleasant and exciting to the bold boat rider, but drew the admiring astonishment of innumerable chipmunks and lizards and one anchored buck.

SIXTY MILES AN HOUR.

Twenty miles an hour was well enough, but it suddenly was brought to the notice of the mariner that he was going down hill, and with what looked like a perpendicular descent before him. This was the dreaded "half mile curve," the sharpest fall of the flume. Before the thoroughly startled *Chronicle* man could place a protective hand upon his hair or snap a fragment of prayer, the boat shot out like a bullet from a gun, and in five seconds the hatless roister, with his eyes starting from his head and a deathlike clutch on the sides of his vessel, found himself safely voyaging along a quiet level, and was joyfully received by Mr. Haist, who stopped the boat and informed the bold voyager that he had done what no other human being

had been known to do and live—gone over water at the rate of sixty miles an hour. If Mr. Haist had not been a large man the reporter would have performed a feat much more satisfactory to himself. A long pull at the flume (they call it "Governor Brown") offered by the engineer, however, restored the journalistic nerve and temper.

The average speed at which timber will be floated is set down at twenty miles per hour.

TEN WEEKS' WORK.

To complete this immense flume of fifteen miles has taken just ten weeks. In that time all the trestlework, stringers and boxes have been put in place. The method of construction has been simple as rapid. At various given points water could be turned on, and as the boxes were laid others were floated through and the flume would float the material for its own creation. The greatest day's work was a quarter of a mile. Four gangs of thirty men each have done the work. It has required 2,000,000 feet of lumber and twenty tons of nails to build the flume.

THE WATER SUPPLY.

The main supply of water is drawn from Hunter's Creek, which is diverted from its bed near the source by dams, and its waters collected in two reservoirs.

The reservoirs are models of solidity. The upper one is 600 feet long, with an average depth of ten feet; the other is 1,100 feet long with a depth of ten feet. A ditch nearly two miles long brings the water to the first reservoir, whence it is conveyed three miles and a quarter to the flume by means of a feeder, which is a strong square box well braced, capable of carrying 450 inches of water. A stream of pure water, large enough to supply Virginia City, rushes through this feeder.

There is another feeder of the same capacity, four miles long, which drains Thomas' Creek and connects with the flume half way down the mountain. The purpose of this second immense feeder is to supply whatever waste may have occurred down to its point of junction. Heavy timber dashed down the grades, when making the sharper turns, throws out considerable water.

In addition to this Thomas' Creek feeder there are many smaller ones which catch the waste water and give it back to the flumes at points lower down. The supply can be regulated to a ninety by means of the dams and waste gates in the feeders.

The Company have more water at command than they can possibly use. In the event of a scarcity, however, Herford Lake, a beautiful sheet of water resting in a diplo on the mountain top, can be drawn upon.

TIMBER.

The timber thickly covering the 12,000 acres owned by the Company is mainly fir, yellow pine and tamarack. Mr. Herford calculates that he will be able to obtain 500,000 cords of firewood and 100,000,000 feet of saw-logs, of an average diameter of 28 inches, and 30,000,000 feet of hewn timber. There is now ready for fluming 20,000 cords of seasoned firewood and 3,000,000 feet of square hewn timber. Mr. Herford intends to land this vast quantity of wood at the mills in Storey and Lyon counties during the present season, with an additional 15,000,000 feet of square timber.

THE SAWMILLS.

Which are to reduce the great body of timber to firewood and logs are first-class, giving employment directly and indirectly to four or five hundred men.

The lower mill on Evans' Creek is kept running night and day, and has a capacity of 50,000 feet per day when working upon small stuff, and when on large timbers 70,000 feet.

The upper mill is run 12 hours at 24 hours at present. Its capacity is 15,000 feet of small, or 25,000 feet of large timbers per day.

RANDOM NOTES.

The whole work has been conducted on the most colossal scale. Over fifty miles of good wagon road have been built through the mountains for hauling materials for the construction of the flume.

The highest point of the flume from the plain is 3,700 feet, and on an air line from terminus to terminus the distance is eight miles, which gives seven miles of twists and turns.

There are to be three falls at the Huffaker landing and telegraphic communication with the shipping points. By these means each kind of wood and timber can be floated and landed separately.

It is pleasant to record that notwithstanding the danger involved in the heavy mountain work, not a man has been injured.

Mr. Herford intends to extend the flume five miles further into the mountains this season; and if it can

be done the energy which has in so short a time overcome so many difficulties in carrying out this great enterprise to a successful issue, will accomplish it.

A BLOW OUT.

Thursday will be the occasion of a blow-out. The first bark that accomplishes the fifteen-mile trip is to be greeted with champagne and speeches, as it deserves. *Virginia Chronicle of Tuesday.*

NEVADA DEMOCRAT.—The new evening paper greeted the public last night. It is a very respectable looking sheet, but the first number does not come up to the standard Col. Dow has marked out for his new paper. The next number will be issued on Monday next, and daily thereafter, at 50 cents per week. The Colonel's salutary rules as follows:

The undersigned has vanity enough to believe that his political reputation for firm adherence to the principles of the Democratic party, is a sufficient guarantee for his continued editor and publisher of the Nevada Democrat. He will not be the willing tool of any man who may have political aspirations, at the same time will demand that intelligence in all cases, and education when required, by the peculiar duties of an office, shall be the prominent qualifications, to merit favor and support from the Democratic party.

As to the stereotyped promises made often by individuals assuming the editorial chair, they will in this instance be dispensed with, and the Democrat will be left to be known by its fruit.

J. C. Dow.

NOT SOCIETY BUSINESS.—The races to come off over the track of the Nevada State Agricultural, Mining and Mechanical Society in July are in no sense Society business. They are

Mr. A. K. Lamb's meets. He has the use of the speed ring but has no control of the property or privileges of the Society and is not allowed to appoint the judges, but is solely responsible for the purses offered, and is entitled to any credit that may attach to the arrangement, but is not allowed to obligate or involve the Society in any manner. So Mr. Leete, the President, informs us.

BUTLINS.—Another bar of bullion was brought in from Payette yesterday. Things are going along slowly but surely in that camp.

MAGIC STOP ORGANS.—These grand organs, manufactured by the New Era Organ Company, North East, Penn., contain all modern improvements found in any reed organs, and in addition have exclusively the inventions and improvements of Jno. A. Smith, among which should be mentioned the patent magic stops, (giving the player the most perfect control of the organ without the necessity of removing the hands from the key-board while playing).

The patent adjustable blow pedals, (for the accommodation of short or tall persons). The patent full organ stop; patent name board and register; improved swell and patent improved case, of new and beautiful design. In addition to its other distinctive features these Organs are noticeable for their full, round tones, so bright and cheerful; while possessing the utmost purity and sweetness. The charming beauties of the vox celeste ever impress the listener with admiration, while the peculiarly weird-like sympathetic effect of the vox humana is most enchanting. For the value of its exclusive improvements and great attractions, for simplicity of construction, for excellence of workmanship and material, for beauty of design and finish, these organs have no equal. They are made either 6 octave or 8 octave—in plain, medium, or elaborate cases—with two, three, four or more sets of reeds; the single manual organs having from four stops to fourteen stops, and varying in price from \$200 to \$350. W. J. Marsh is the General Agent for the Pacific Coast with headquarters at Reno. Judge Bowker, Mrs. Greely, and others in Reno pronounce these organs all that is claimed for them.

HARNESS AND SADDLES.—It is an established fact that the best articles in this line are the cheapest, and it is also an established fact that J. N. Jacovich & Co. make and keep the best to be found east of the Sierra Nevada Mountains. Why? Because they keep the largest and best stock of leather to be found, consequently they have a better chance to sort their leather, picking straps suitable for each and every part of each harness, so that they can and do make a better article than those small shops that have to cut a whole harness out of one or two sides of leather. So if you want a good article of anything in their line and at prices of its actual value you will realize and save money by buying of them in preference of buying elsewhere. They also keep the very best of buggy whips, saddle trees, collars and all kinds of harness and saddle findings to be found in California or Nevada. Harness and saddles of all kinds kept on hand and made to order. All hand work, and none but the best of workmen employed.

CHECK LOST.—A check on the Bank of California, Virginia City, payable to Robert McCannaghon, for \$60 25, and signed by J. B. Herford. All persons are cautioned against negotiating said check as payment has been stopped.

TREASURE.—The McGinley Sisters, who have been playing to crowded houses in Carson and all the principal towns in this section will give an entertainment at Dyer's Hall this evening. A grand bill will be presented. For particulars see programmes.

GOD FELLOWS' ELECTRON.—Frutkae Lodge, No. 14, I. O. O. F., at its regular meeting last night elected the following officers for the ensuing term: J. L. Wheaton, N. G.; G. F. Voshng, V. G.; E. A. Brown, R. S.; Gen. W. Cunningham, P. S.; Jacob Geist, Treasurer; J. N. Jaquish, M. G. Lake and E. F. Reed, Trustees.

INTERESTING TO THE LADIES OF RENO AND YACINTH.—The new dressing establishment opened by the Misses Vance, on Plaza street, opposite the freight depot, will receive any make to order in the latest styles, all kinds of plain and fancy sewing.

BOOTS AND SHOES, ETC.—It is an established fact that these articles can not be got along without. Hence, it necessarily follows, that in the purchase of them we should not only look to price but to quality, for none of us desire to pay an extortionate price for an inferior quality of boot or shoe. There is no doubt but that John Sunderland can give us complete satisfaction in both respects. Then to Sunderland's, (on Virginia street), we will go, for boots, shoes, slippers, and all goods of that class.\*

NORTON.—Mr. Nels. Greenman is no longer our authorized agent. Our patrons will govern themselves accordingly. Su Lee & Co. \*

EL DORADO SALOON.—Conrad Ziegler has just taken charge of this place, opposite Wintermotel's Hotel. Every attention paid to the patrons.

Musical headquarters. \*
